

WHO WE ARE AND WHAT WE DO...

CUSTOM **PACKAGING** SOLUTIONS

Iljin Gratec USA, Inc. is a full service rotogravure printing and convertor of flexible packaging with over 20 years of industry experience. We are not just a packaging vendor. We are your marketing partner. With high quality rotogravure printing, we provide extensive printing and lamination capabilities to supply a wide range of flexible packaging needs. We offer various film structures in rollstock, lidding film, various preformed pouches and more. From design to delivery, we follow you through each step along the way to produce the highest quality product with an eye-catching design for market shelves.

POUCH

Having rich industry experience in preformed pouches, we offer various types of pouches with different sizes, styles, and color options. They are an alternative to rigid packaging and helps increase in versatility and consumer convenience.

SPOUT POUCH

Spouted pouches are best suited for liquid or granular products. They are economical because they are a lot smaller to ship to a facility than a bottle would be. It is also environmentally friendly because they revert to a very small footprint in a landfill.

ROLLSTOCK

Engineered for high speed vertical or horizontal Form-Fill-Seal equipment, we specialize in the production of 8~10 color printing and adhesive lamination on a variety of different barrier laminated film for all types of flexible packaging products.
